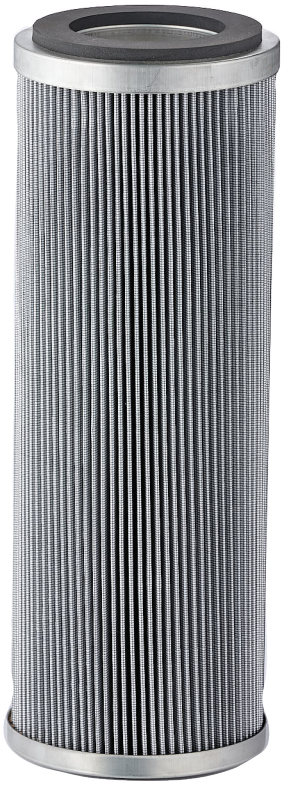
PLEATED FIBERGLASS COALESCER

Filtration Systems makes a wide range of fiberglass filter coalescers for natural gas purification.



These filters are designed for inside-out flow, which enhances the coalescing process via velocity-reduction. The pleat pack is secured with a steel outer cage to prevent rupture.

- **A** Buna-N or Viton gaskets provide positive seals against leakage.
- **B** Welded steel cages prevent rupture.
- **C** Polyester felt provides liquid drainage.
- **D** Optional high strength center tubes.
- **E** Multi-layered microfiberglass and synthetic media remove both solid and liquid contaminants.
